# The Best for your Aircraft

LDL Live Data Log  
For ULM and General Aviation

# Why viaair.it ?!

The Pilots who are monitored in real time by the instructors, make flights with greater safety and perform the missions with greater scrupulousness avoiding imprudence. In addition, the reporting of heavy landings allows a better assessment of the student in the landing phases and a more accurate control of the mechanical structure of the aircraft.

In case of Crash the rescue will start automatically, the Operations Center will manage the intervention

**RESCUE**

The management platform and the scheduling of flights allow an optimized management of the flight school / Aeroclub leading to a better efficiency.
